

Red Hat

Real-Time Agentic AI Driven Security for OpenShift, Ansible, Edge, and Hybrid Environments.

Seamless Red Hat Integration: Security Without Compromise.
Toil Reduced. Time Reclaimed. Try GuardDog AI P.O.V. for Free.

Key Features

- Attack surface management with complete visibility across containers and hybrid workloads.
- < 1 Second Containment: AI-powered sidecar stops attacks before they spread.
- Agentless and Universal: Works across OpenShift Kubernetes IoT legacy VMs edge hybrid cloud.
- Zero False Positives: Only validated alerts surface, cutting noise and wasted time.
- Multi-Tenant Ready: Scales cleanly for MSSPs and service providers.

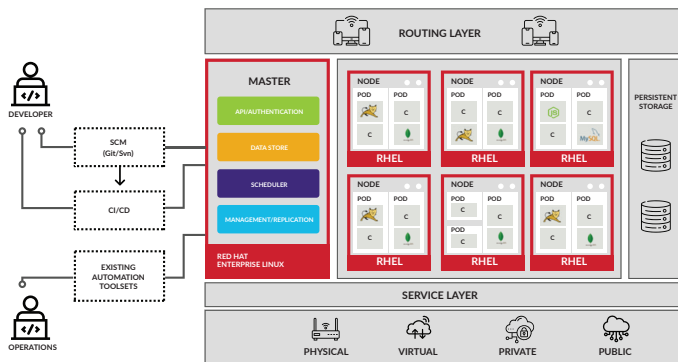

Partner Benefits

- Amplifies and re-values your existing security investments
- New Revenue Streams: Resell GuardDog AI as an add-on to Red Hat deployments and existing security solutions.
- Service Differentiation: Offer unique autonomous, real-time, AI detection and agentic containment.
- Operational Efficiency: Deliver 200x faster containment with 65% less analyst work and toil.
- Customer Stickiness: Security embedded into Red Hat stack means it's harder for customers to churn.

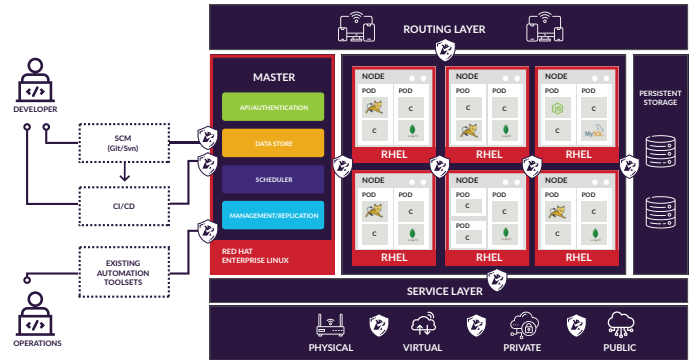

“Red Hat’s ecosystem is looking for AI-driven security automation across OpenShift Ansible and Edge. GuardDog delivers exactly that.”

The Red Hat + GuardDog AI Advantage

OpenShift Enterprise Architecture

OpenShift Enterprise Architecture with GuardDog AI

Why Partners Choose GuardDog AI

- 200x faster mean time to detect and contain
- 65% reduction in operational overhead
- Deploy in hours not weeks
- Multi-tenant ready scales across client bases with low overhead
- Works as a sidecar to existing security solutions

Industry Use Cases

- **Healthcare** Protect un-agentable medical devices
- **Finance** Meet compliance stop insider/lateral movement.
- **Retail and Edge** Secures IoT, POS, and distributed endpoints

Book a 30-minute demo with GuardDog AI and see why Red Hat partners are adding GuardDog to their RHEL, Linux, OpenShift and Edge offerings.
